

To

Neva s.r.o.

Att. Mr. Ladislav Duba

Roslev the 29. of marts 2010

My engineering experience of RE-MAX 500 cnc:

- We have a sawing line with 4 RE-MAX 500 cnc, for sawing thin lamellas in 6 mm thickness.
- We cut in Frisch ach and oak, and dried redwood.
- Cutting speed is 6 - 10 meters pr. minutes.
- The blades can cut for up to 8 hours between grindings.
- The grinding is done on a Neva Grinder BPL CNC.
- Our cutting tolerance $\pm 0,2$ mm.
- We have worked with these Neva machines in 2 years and until now without problems.
- I can strongly recommend this machine.
- I find the heavy construction as a very important share.

For questions you are welcome to contact me.

Best Regards

Henrik Østergaard
